

Visitor Central™

Identify, authenticate, and log visitors in no time flat.

The strong, silent type

Visitor Central from GE Security packs the power of integrated visitor management into a scalable, easy-to-use solution that stands solidly on its own, or works in perfect harmony with Picture Perfect™ or Secure Perfect® access control systems. Flexible to deploy and intuitive to operate, Visitor Central increases your facility security by alerting staff to unwanted visitors and getting the authorized visitors through the registration process quickly. New visitors register in less than twenty seconds and returning visitors are even faster.

- Faster registration; new visitors in 20 seconds or less, repeat visitors in half that time
- Scalable system that grows with your needs—from standalone kiosks to multiple, integrated enterprise-wide stations
- *Premier Customer Service* with pre-packaged, 100% tested, standalone systems that are ready to use; 24-hour component replacement
- Unlimited visitor types and Watch Lists with Automatic Watch List comparison
- Complies with Sarbanes-Oakley Act (SOX)
- ID scanning for improved accuracy and speed

The only visitor management system you'll ever need

Visitor Central's sophistication grows with the needs of your facility, so whether you handle just a few visitors a day, or a steady stream of guests, your building is protected.

In its standalone configuration, Visitor Central offers the benefits of a full-featured management system, complete with Sarbanes-Oxley (SOX) compliant historical records, Web-based appointment scheduling, and quick-service kiosk registration.

When integrated with Secure Perfect or Picture Perfect access control, also from GE Security, the full power of Visitor Central becomes apparent. With no additional modules to purchase, its easily deployable thin client requires no installation on your desktop work station. Scalable to serve one kiosk, multiple stations, or as an enhancement to Secure Perfect or Picture Perfect, Visitor Central works as part of the enterprise-wide security and access control system to deliver a whole that's much more than the sum of its parts. This means operators are always in familiar territory and in control, no matter how hectic their day becomes.

Fast, faster, fastest

The last thing a visitor management system should do is create a bottleneck at your front desk. It's hardly the first impression you want to create. Visitor Central keeps things moving by shaving precious seconds off the registration process, while ensuring every visitor gets a thorough evaluation for access to the facility in a timely manner. The pace is kept brisk thanks to Visitor Central's intuitive interface with automated functions, as well as support for self-serve touch-screen kiosks and web-based pre-registration of visitors. Visitors without an appointment can check themselves in using a self-service kiosk; your operator or security guard can also register visitors whether or not they have an appointment. An optional driver's license scanner further simplifies the process and puts an end to front desk slowdowns forever

The result:

- More people through in less time
- Better security for your facility, its contents, and its people

Identify, authenticate and log visitors in no time flat.

Premier Customer Service

All customers of Visitor Central receive GE's premier customer service. This includes:

- Turnkey package arrives 100% fully tested with documentation
- 24hr component replacement on turnkey packages
- GE's commitment to excellence

Stranger in paradise

Valuable assets, employee safety, sensitive data. They're all at risk when the wrong people gain access to your building. Visitor Central makes sure they don't. Visitor Central maintains visitor watch lists of people who are not allowed into your facility. The system automatically checks these lists before issuing a badge. This allows your operator to focus on ID verification, and eliminates human error. The visitor watch lists even check for similar sounding names that may have been misspelled during registration. For even greater security, Visitor Central's optional scanner extracts data from drivers licenses with flawless accuracy. This, along with photo ID verification, ensures that the people entering your building are the people you want in there.

The power of integrated control

When integrated with Picture Perfect or Secure Perfect access control, Visitor Central provides the same level of control and tracking with visitors that you have with employees. You can authorize employees for visitor hosting—based on your employee's access privileges. You can also assign access privileges to visitors depending on who they are or who they're seeing. This allows visitors to open doors to authorized areas and create an audit trail for every visit. You can even configure access privileges to expire at a specified date or time, so that multi-day visitors such as contractors use the same visitor's badge throughout their stay.

Custom badges, flexible options, low cost supplies

Visitor Central supports a wide variety of badge printing options so that consumables are always easy to find and economical to use. Easily print self-adhesive badges, laminated ID badges or one and two-sided badge inserts for use with holders and other accessories.

Visitor Central also supports all industry standard badges including the new fold & clip and fold & hang badges which don't require holders. You can even produce tear-off car passes or nondisclosure agreements that your visitors sign and leave with the attendant.

Visitor Central's custom badge designer is only limited by your imagination. It lets you add your company logo or other graphics. You can even colorcode badges by visitor type. The possibilities are endless.

Comprehensive reporting

Paper-based visitor logs are often incomplete, illegible and difficult to search. Visitor Central maintains a centralized database of all visitors, giving you complete, instant access to visitor information. Visitor Central also generates a variety of reports to meet your individual requirements.

Facility partitioning

Visitor Central allows for an unlimited number of facility partitions. For example, both the appointments and the check-in log for your New York and Los Angeles offices have separate permissions. Employees in New York cannot make or view appointments for Los Angeles unless given specific rights to do so. Administrators, however, can view both appointments and logs for everyone in the system.

Start here

The quick-setup Visitor Central Kiosk gets you up and running in no time. This out-of-the-box system includes everything you need for effective and economical visitor management. Simply unpack the components and connect them together. Use it as a standalone system or integrate it with GE Security's Secure Perfect and Picture Perfect for a total badging and access control solution. It just doesn't get any easier than that.
