FireShield® Plus Conventional Fire Alarm Control Panels

Location: Flower shop

Decor: Finely decorated, gentle hues

Solution: Discreet *FireShield Plus* remote annunciators, Genesis horn-strobes

peace

FireShield® Plus fire alarm control panels demonstrate that value doesn't have to come at the expense of quality, and that small building owners don't have to settle for second-rate fire protection. With FireShield Plus comes a full lineup of advanced features designed expressly for new and retrofit projects that cry out for simplicity, yet need state-of-the-art protection. These two attributes aren't mutually exclusive in a fire alarm control panel. At least not now.

Reliability you've come to expect from the industry's leader in fire alarm technology.

• Easy to install
• Simple to operate
• No-fuss programming
• Integrated DACT/Dialer
• 3, 5, and 10 IDC models

FireShield Plus takes the very best conventional fire alarm technology available today and blends it with features that benefit installers, contractors, building owners and occupants to provide an effective and economical solution for all small building needs.

# of mind.

Building owners like FireShield Plus's price and the peace of mind that comes from knowing their property is protected by equipment engineered and manufactured by the same people responsible for fire protection in some of the most valuable buildings on the planet. For owners and occupants that same inherent reliability built into every GE fire alarm panel reduces the risk of nuisance alarms — as well as the disruption to business and related expenses that result.

With FireShield Plus there is no longer any reason to skimp on fire protection — no matter how small the job is. Full-featured and flexible, FireShield Plus meets the individual needs of small building applications and leaves plenty of room to accommodate upgrades and renovations far into the future.

Annunciators
hidden in plain sight

FireShield Plus remote zone and system annunciators mount to standard electrical boxes and present a clean, finished appearance that blends discreetly with any decor.

Smart detection at a conventional price

When combined with the GE 500 Series smoke detectors, FireShield Plus provides intelligent features at a conventional price. GE's patented *CleanMe®* remote maintenance reporting feature enables 500 Series smoke detectors to send an alert to the FireShield Plus control panel if the detector drifts out of its sensitivity range. This feature reduces the chance of a false alarm. In addition, 500 Series conventional smoke detectors have built-in drift compensation extending the time for any potential cleaning of the chamber. If cleaning is ever necessary, it is literally a snap with GE's exclusive replaceable optical chamber.

field devices

Genesis: The model of discretion...
Ultra-slim, single- and multi-candela strobes, horns and combi-
nation devices, Genesis Series brings high-performance features
and eye-pleasing elegance to every application.

Get the message...
The FSRA10 is a flexible and easy-to-configure remote an-
nunciator with capacity for up to ten zones. It includes ten
bi-color LEDs (red/yellow) for indicating active zones, and
ten yellow LEDs for indicating zone troubles. Models are
available with common control switches. The annunciator
mounts to standard North American two-gang or 4-inch
square electrical boxes. A surface box is also available.
